JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 109, Numbers 1–2, 30 September 1999

Contents

Preface ix

A.G. Kosovichev
Inversion methods in helioseismology and solar tomography 1

P.H. Hauschildt and E. Baron
Numerical solution of the expanding stellar atmosphere problem 41

K. Werner and S. Dreizler
The classical stellar atmosphere problem 65

W. Schweizer, P. Faßbinder, R. González-Ferez, M. Braun, S. Kulla and M. Stehle
Discrete variable and finite element techniques applied to simple atomic systems 95

R.I. Klein
Star formation with 3-D adaptive mesh refinement: the collapse and fragmentation of molecular clouds 123

E.A. Dorfi
Implicit radiation hydrodynamics for 1D-problems 153

J.Mª. Ibáñez and J.Mª. Martí
Riemann solvers in relativistic astrophysics 173

F.A. Rasio and J.C. Lombardi Jr.
Smoothed particle hydrodynamics calculations of stellar interactions 213

R. Speith and H. Riffert
The viscous gas ring as an astrophysical test problem for a viscous SPH-code 231

R.D. Sydora
Low-noise electromagnetic and relativistic particle-in-cell plasma simulation models 243

J.M. Stone
The ZEUS code for astrophysical magnetohydrodynamics: new extensions and applications 261

A. Mezzacappa and O.E.B. Messer
Neutrino transport in core collapse supernovae 281

W.R. Hix and F.-K. Thielemann
Computational methods for nucleosynthesis and nuclear energy generation 321

J. Wambsganss
Gravitational lensing: numerical simulations with a hierarchical tree code 353

H.M.P. Couchman
Simulating the formation of large-scale cosmic structure with particle-grid methods 373

R. Spurzem
Direct *N*-body simulations 407

S. Bonazzola, E. Gourgoulhon and J.-A. Marck
Spectral methods in general relativistic astrophysics 433

J. Frauendiener
Calculating initial data for the conformal Einstein equations by pseudo-spectral methods 475

E. Seidel and W.-M. Suen
Numerical relativity as a tool for computational astrophysics 493

Author Index to Volume 109 (1999) 527
